

THE EDGE DISTRIBUTES; THE SYSTEM OF RECORD DECIDES

several regional Xano instances behind one global edge router, not one cluster stretched across regions

Heavy box = the gate. Dashed = a projection, not truth.

FOUR RULES

Xano wins the Durable Object is a projection; on disagreement, the ledger rules	Fail closed stale projection or unreachable region means deny, never guess	Stay home personal data never replicates; only an opaque routing key is shared	Sign both the signature binds the posture and the ledger head hash
